

## Use of Pizza Boxes for Storage of HO Rolling Stock

Bob Wilkins [modeltrainsounds.com](http://modeltrainsounds.com)

An inexpensive storage solution (except for the cost of the pizza) is to use pizza boxes made for take-out or pizza delivery. The boxes are cleaned of food debris and painted on the inside with white latex paint that helps take out any odor and oil stains. The sides are reinforced by wrapping around the sides of the box with duct tape. Label the box with the type of rolling stock stored. eg Passenger Cars, Steam Locomotives, Box cars, Cabooses etc. The boxes can be staked for storage and used to display inventory.

The interior of the box is painted with white latex paint to eliminate debris and oil stains.

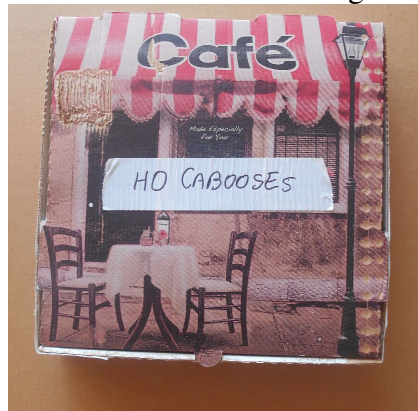

The paint quickly dries in the sun leaving a clean finish.

The box is reinforced with duct tape around the outside and on the inside.

The box is filled with appropriate rolling stock and labeled accordingly.

Finished box easy to store and stack. ....
